SMOKERS COUGH

HOW CAN SALT THERAPY HELP?

Salt therapy aids in the process to release toxins from deep within the ex-smokers lungs. The microscopic dry salt particles will clear away mucus that harbors bacteria, clogs bronchial tubes, and causes coughing. Mucus will loosen and be coughed up, clearing passageways.

WHAT TO EXPECT?

Smoking paralyzes the cilia that line our respiratory tract. Salt therapy soothes inflammation, revives the cilia allowing mucus to be coughed out. Once the mucus clears, coughing will begin to calm down. You may notice quite a bit of coughing in the beginning. This means it is working.

RECOMMENDATIONS

We recommend coming 2-4 visits per week for the first month. If you can come more during the first two weeks you will see better results. The Unlimited Monthly Membership is the best option as it allows you to come an unlimited number of times. Once you find that your cough has subsided you may notice after 30-60 days that you can come less frequently.
